PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building scalable frontend and AI-powered web applications using React.js, Next.js, TypeScript, and FastAPI. Specialized in high-performance dashboards, large-scale data visualization (5M+ records), and modern frontend architecture. Experienced in RAG systems, LLM integrations, hybrid search, vector databases, and enterprise SaaS applications. Strong expertise in frontend performance optimization, reusable component architecture, and state management.

CORE EXPERTISE

Frontend Performance Optimization • Large Dataset Visualization • React Architecture • AI Chatbot Interfaces • RAG Systems • Dashboard Engineering • State Management • Enterprise SaaS Applications • API Integration • Reusable UI Components

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Redux Toolkit, Context API, Vite, Responsive Design

Backend: FastAPI, Python, REST APIs

Databases: PostgreSQL, pgvector, Redis

AI/ML: RAG, LLM Integration, NLP, Claude, GitHub Copilot, Gemini

Visualization: AG Grid, D3.js, Vega-Lite, Chart.js

Performance: Lazy Loading, Code Splitting, Chunk-based Loading, Virtualization

Tools: Git, GitHub, VS Code, Agile, CI/CD

PROFESSIONAL EXPERIENCE

Software Engineer — VARAISYS PVT. LTD., Noida

Jun 2022 – Present | Intern: Jan 2022 – May 2022

- Built scalable SaaS dashboards and enterprise client applications using React.js, Next.js, and TypeScript.
- Developed high-performance visualization systems handling datasets of 5M–10M records using AG Grid, D3.js, and Vega-Lite.
- Improved UI responsiveness and reduced rendering latency through chunk-based loading, lazy loading, and optimized rendering strategies.
- Led frontend development for the VRC (Visual Reliability Chart) project with reusable component architecture.
- Built analytics platform (MAT) with custom chart editor, reporting workflows, and export functionality.
- Integrated REST APIs and optimized frontend data flows for large-scale enterprise dashboards.
- Contributed to AI-driven systems including Annotator, APS, and Quark9 for data annotation and interview automation.
- Collaborated in Agile development workflows with cross-functional product and backend teams.

Software Engineer (Contract) — Veryon

Jan 2025 – Jan 2026

- Developed ALICE, an AI-powered enterprise chatbot using AWS Bedrock trained on confidential aviation datasets.
- Built a Global Search module using React, Vite, and TypeScript inside a legacy .NET MVC architecture.
- Integrated modern frontend applications into legacy systems using iframe and .cshtml architecture.
- Delivered production-grade features used across enterprise aviation platforms.

PROJECTS

AI-Powered Dubai Business Assistant (RAG System)

- Built an intelligent chatbot using RAG architecture with hybrid search (database + semantic + web search).
- Implemented conversational memory, personalized responses, and file-based Q&A workflows.
- Designed scalable backend services using FastAPI, pgvector, and automated ingestion pipelines.
- Integrated LLM-based response generation and semantic retrieval for enterprise AI workflows.

EDUCATION

B.Tech in Information Technology — R.D. Engineering College, Ghaziabad 2018 – 2022

CERTIFICATIONS

Meta React | Gen AI: Beyond the Chatbot | GitHub Copilot | Claude Code
